Regarding claim 1, Emerling et al. '343 discloses an interior trim component (10) for a vehicle, said trim component comprising a body (12); and an article holder (24) having a support structure for supporting an article (22), , said article holder pivotally connected to said body and movable between a storage position (Fig 3) and a deployed position (Figs 4 and 5), wherein in the deployed position said support structure of said article holder is higher relative to a position of said support structure when said article holder is in the storage position, and wherein said article holder is removably mounted to said body when in the deployed position.

Regarding claim 3, Emerling et al. '343 discloses the interior trim component (10), wherein said body is an interior trim panel.
